Major Announcements

BPEA EQT to acquire a major stake in Indium Software

Larger wings to soar higher!

[Read More](#)

We are delighted to share the exciting news that Barings Private Equity Asia (BPEA - EQT), a prominent global private equity (PE) firm, is set to make a substantial investment in Indium. Leveraging their extensive expertise as investors in the technology sector over several decades, BPEA - EQT's involvement promises to be a transformative force.

This significant investment not only empowers us to reach new heights but also accelerates the global scaling of Indium.

Franklin Templeton

Franklin Templeton, a global leader and one of the world's largest investment managers based in California. Our client, faced an issue with standalone MS access application and we helped them transform from a manual and time-consuming annual impact investing reporting process to an efficient automated solution featuring a user-friendly system.

Transformation ▶▶▶▶ of Annual Impact Investing Reporting

Client Overview

The client (Franklin Templeton) is a global leader in asset management and one of the world's largest investment managers based in California. They provide comprehensive investment and advisory services to individuals, corporations, and financial institutions. One of the world's largest asset managers with \$1.5 trillion in assets under management (AUM)

Executive Summary

This case study illustrates the successful transformation of a manual, time-consuming Annual Impact Investing Reporting process into an automated, efficient, and user-friendly system. The previous reliance on a standalone MS Access application presented significant limitations, prompting a need for a more scalable, flexible, and Error-free solution.

Problem statement and pain points

Inefficient and error-prone process:
The existing MS Access system was slow, manual, and highly susceptible to human errors, limiting the report generation to a frequency of just 2 to 3 times annually.

Lack of customization and scalability:
The system was not scalable for individual client needs and lacked customization options.

Indium's Solution

Addressed core issues: The primary goal was to overcome all the identified challenges, focusing on user accessibility, security, and scalability.

Role-based access system: Implementation of distinct access levels for various roles like read-only, portfolio manager, research manager, and admin.

Scalable & user centric approach: Shifting from MS Access to a scalable, cloud-based solution, with enhanced data handling capabilities. The new system is focused on a user-centric design by prioritizing intuitive design and user-friendly interfaces approach with report preview for error free reporting.

Rapid onboarding and agile methodology: Ensuring quick integration of teams and flexibility in project management.

Adaptable solution architecture: Developing a minimum viable solution that is adaptable to changing requirements and scalable for future needs.
