

IT Services & IT Consulting Case Study

Accounts receivable and payable digitization

Client Overview

- The Client is a largest and leading automobiles manufacturing corporation with global presence for about 85 years. The client registered over \$250 Billion revenue in the financial year 2021.

Project Overview

- Indium transformed the current manual process (invoice creation, approval and sending it to customers)to completely automated and digital. This system needs to interact to multiple systems like Darwin, SAGE etc.,

Business Requirements

- Eliminate the manual invoicing process (Payable & Receivable)
- Avoid any bottlenecks and dependencies on individuals to manually retrieve data from HR and accounting system (SAGE)
- Have the data stored as a single source of truth for analytics and reporting
- Allow automated currency exchange rates calculation and configurable tax calculation logic.

Indium Solution

- End-to-End digitization using power platform components and SharePoint Online
- OpenAPI & Custom connectors for retrieval and maintenance of exchange rates.
- Internal/External user access segregation using SSO & 2 factor authentication.
- On Demand and scheduled data synchronization with Accounts and HR System for real time data
- Insightful business intelligence report using PowerBI dashboard and reports

Tools

Business Impact

- Implementation of Robust application helped the client to reduce 2.5 FTE of manual invoicing processing , validation and reporting
- 4x** reduction in development time using Power Apps platform custom/in-built components and connectors and achieved faster time-to-market
- Multilingual capability** enables the client in accessing the application across different geographical locations without requiring for external support
