

# Test Consulting

The Client: Leading Federal bank

## Business Requirement

No dedicated QA team

Too many bugs in their application

Improve the quality assurance / testing process within the SDLC

Compatibility testing of the application across platforms and browsers

## Our Solutions

Created a Self-Sufficient QA team for handling their internal QA needs

Prioritized QA Coverage and Implemented QA Methodology / Process

Introduced Templates, Reports & Checklists and built a QA suite

Recommended an approach for regression testing to ensure reduced cycle time for testing

Analysed and recommended improvements for QA delivery process to ensure high quality code to UAT for all applications

## Business Impact

Suggested the baby step approach towards maturity in QA

Prepared a Book of Knowledge for future training purposes internally within the Bank

Designed Functional and Partial System integration test cases to give thorough business knowledge for developers

**Technologies** – Development Framework – MySQL, Java, TOMCAT; Data base – MySQL 5.6.15

**Tools:** Defect Management Tool – Bughost
